Figure 1: Leave-one-out IV Tests, Balanced Controls

Notes: Regression results according to equations in the Empirical Strategy section, weighted by 1940 CZ urban population. All specifications include census region fixed effects and CZ-level controls for the sum of shares, coastal, and 1920 transportation cost. Each parameter estimate comes from a regression that drops one CZ at a time. Robust standard errors generate 95% confidence intervals.

Figure 2: Overidentification IV Tests, Balanced Controls

Notes: Point estimates come from our baseline instrument and three alternative instruments, where all specifications include census region fixed effects and CZ-level controls for the sum of shares, coastal, and 1920 transportation cost, and are weighted by 1940 CZ urban population. Robust standard errors generate 95% confidence intervals.
