2 Disincorporation Idea

Chris Goodman Data allows us to measure year of incorporation for municipalities conditional on it's survival to the present. The Census of governments gives us the count of municipalities in 5 year windows. We can back out the number of amalgamated or disincorporated municipalities from the a stock-flow identity

$$\Delta \text{Munis}_{1940-70} = \text{New Munis}_{1940-70} - \text{Dead Munis}_{1940-70}$$

We have that $\Delta \text{Munis}_{1940-1970}$ is given by the CoG. We also have that $\text{New Munis}_{1940-1970}$ is given by the C. Goodman Data. So "Dead" munis, either disincorporations or amalgamations, can be approximated by the difference in the outcomes from the two data sources

$$\text{Dead Munis}_{1940-70} = \Delta \text{Munis}_{1940-70}^{\text{CGoodman}} - \Delta \text{Munis}_{1940-70}^{\text{CoG}}$$

Note this probably works best for the 2010 long-run outcomes as the Chris Goodman data is conditional on survival to the present, meaning it would undercount any instances where a city is incorporated between 1940-70 but dies between 1970-present.
